Day 1:

Topic: creating salesforce developer org to get started

Activities:

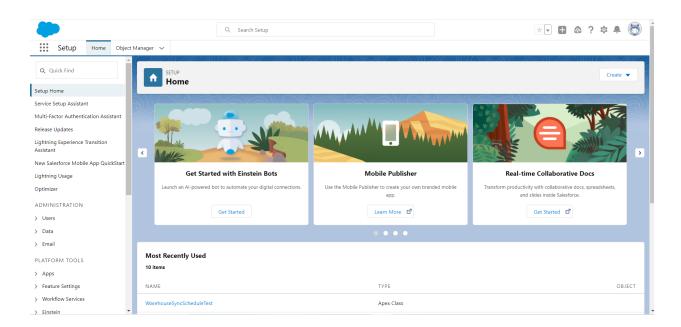

- 1.Creating Developer Account
- 2. Account Activation
- 3. Login to your salesforce account

Detailed Description:

- 1.Go to salesforce.com and click on login.
- 2.Enter the username and password that you just created.
- 3. After login this is the home page which you will see.

I have account in my laptop so I directly entered into salesforce account

Day 2:

Topic: Custom Object Creation

Activities:

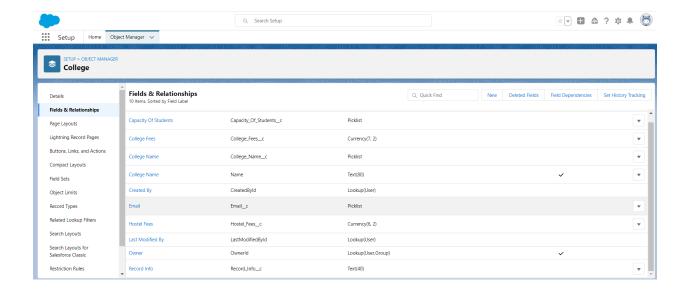

- 1.Create custom object for the applications
- 2.Create fields on college objects
- 3.Create fields on Application form object
- 4. Create field on student object
- 5.Create field on subject object

Detailed Description:

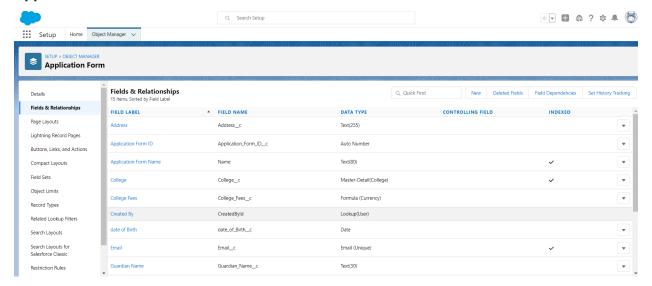

To create custom object in Salesforce, perform the following steps:

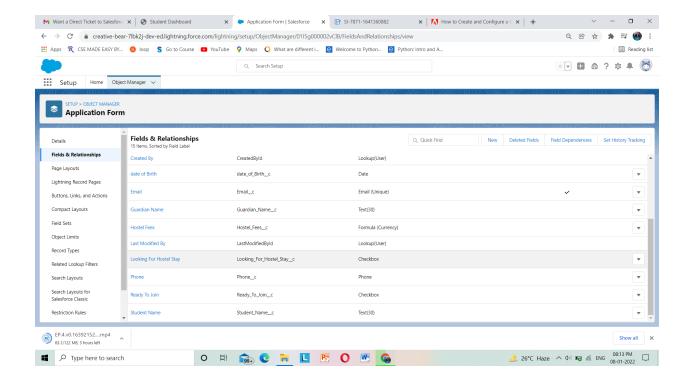

- Log in to your Salesforce account.
- Click **Setup** at the upper-right corner.
- Under the **Build** section, click **Create** and select **Objects**.
- To create a custom object, click **New Custom Object**.
- Enter the name of the Custom Object in Label, Plural Label, and Object
 Name.

Subject object:

Day 3:

Topic: Adding Bussiness logic for the application

Activities:

- 1. Creating Global Picklist Value Sets
- 2. Creating Field Dependencies
- 3. Creating Validation Rules
- 4. Process Automation
- 5. Create The Student Record Using Flow

Detailed Description:

Here are the steps in creating a global picklist:

- 1. Navigate to Setup, then click Create.
- 2. Select Picklists from the drop-down menu.
- 3. The Global Picklists page will pop out. Select New to start creating a new picklist.
- 4. Enter a name for the Label and the Developer Name. In the example above, the admin may use the name City for both fields. Note that Developer Name will become the picklist's actual name.
- 5. Enter a description for the picklist (optional).
- 6. Hit Save. A details page will then appear. The user will see three lists: Picklist

Value Set, Inactive Picklist Values, and Fields Where Used.

7. Click on the New button on the Picklist Value Set. Enter a new value for the list. In this case, enter the names of cities separately per line. Once done, hit Save.

Creating a field dependency fields

To create field dependency

- Go to setup menu and select the object you want to create field dependency.
- Click on filed dependency button

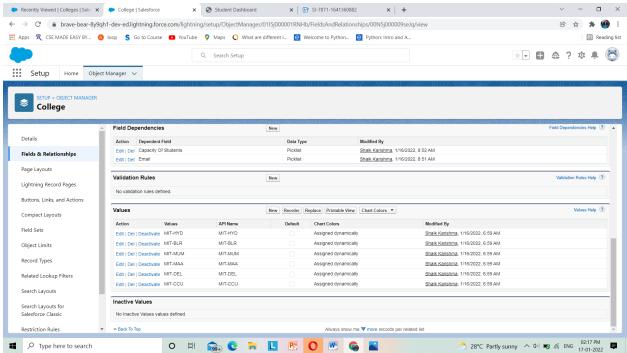

Creating validation rules

- 1. From Setup, go to Object Manager and click **Account**.
- In the left sidebar, click Validation Rules.
- 3. Click New.

Process Builder:

Flow builder:

Day 4

Topics: Batch Apex

Activites:

- 1.Create A Batchapex For Application Form
- 2.Create A Schedular Class

Detailed Description:

1. From the developer console create a new apex class and enter the code.

Batch Apex:

Batch Apex is used to run large jobs (think thousands or millions of records!) that would exceed normal processing limits. Using Batch Apex, you can process records asynchronously in batches (hence the name, "Batch Apex") to stay within platform limits. If you have a lot of records to process, for example, data cleansing or archiving, Batch Apex is probably your best solution.

To write a Batch Apex class, your class must implement the Database.Batchable

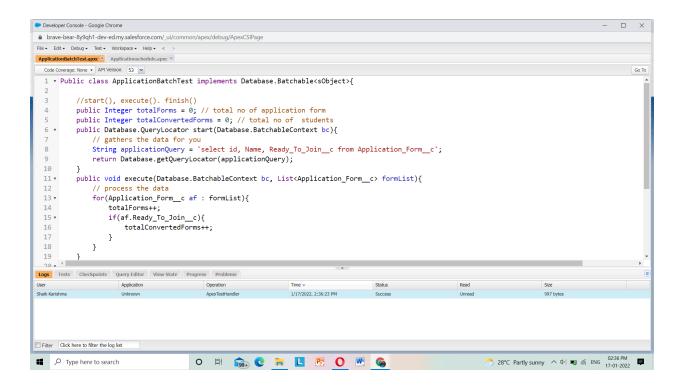

interface and include the following three methods:

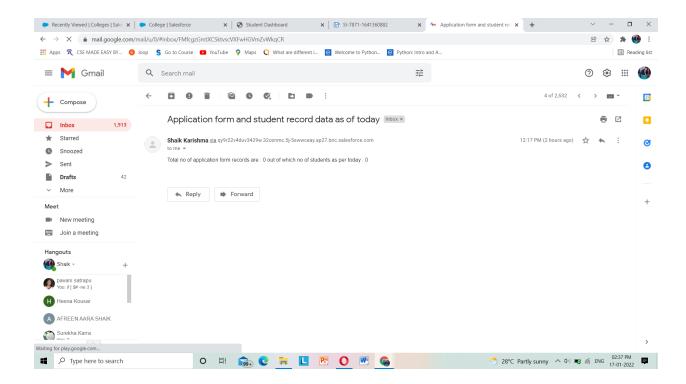

Start

Execute

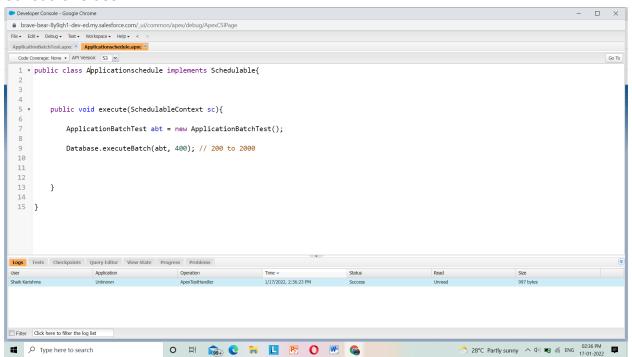

Finish

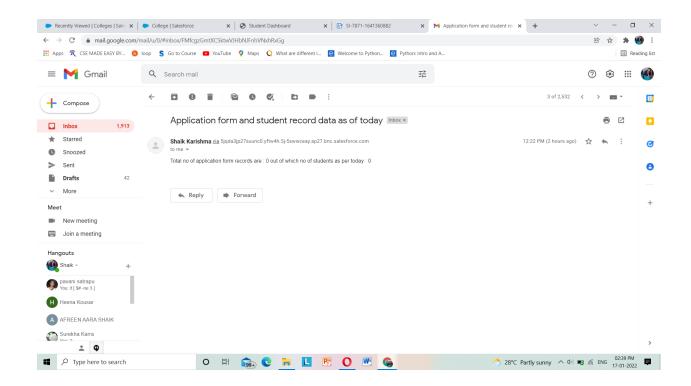

ScreenShots:

Scheduler Class:

Day 5-

Topics: Lightening Web Components

Activites:

Create College DataTable Component(APEX CLASS)

Create College DataTable Component (HTML FILE)

Create College DataTable Component(JAVA SCRIPT FILE)

Create College DataTable Component(META FILE)

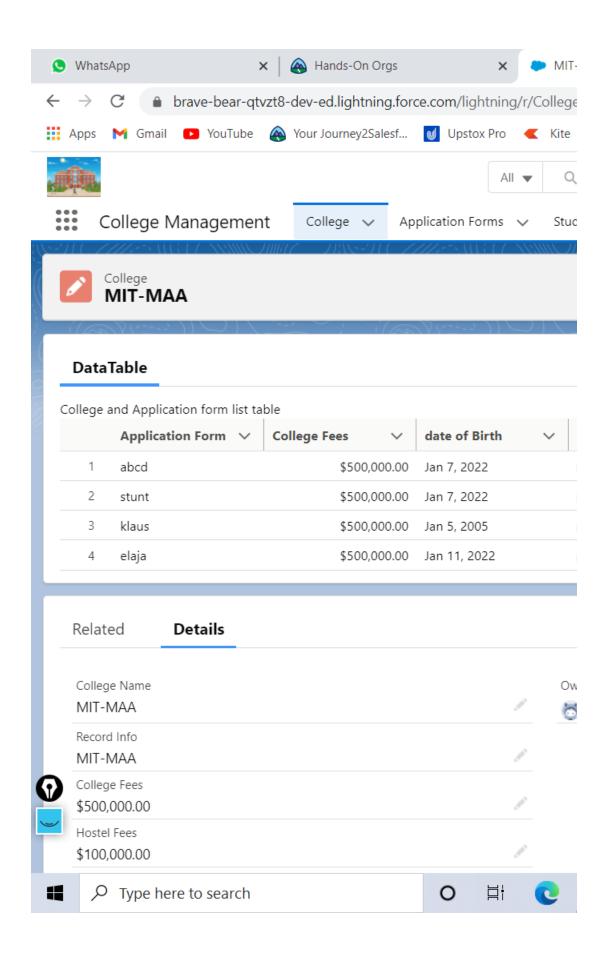

Description:

Apex is a **strongly typed, object-oriented programming language** that allows developers to execute flow and transaction control statements on the Salesforce platform. If you're used to Java or . NET development, you'll find the programming in

Apex fairly straightforward.

We will copy all the files(HTML,Js,Meta) to vs and then link the vseditor to salesforce org
